

Cybersecurity Evaluations of IT security products for Defense Applications

We support the defense industry in safeguarding hardware, software and communications protocols used in defense systems and vehicles against cyber-attacks.

An Accredited Cybersecurity Laboratory

We are accredited by the Spanish National Cryptologic Centre (CCN) to perform cybersecurity assessments of ICT products and solutions. Our security assessments are recognised for accessing the following certifications:

Common Criteria

Up to EAL 6+ | Global recognition scheme

SOGIS

European recognition scheme

Lince

Spanish recognition scheme

Inclusion of Products in the Spanish CPSTIC Catalogue

As a CCN accredited laboratory, we can carry out the evaluations and give required support to manufacturers to get their products included in the CPSTIC Catalogue, either in the Qualified STIC Product category or in the Approved STIC Product category (for systems that manage classified information) [+ find out more](#)

Specialist in Penetration Attacks on HW, SW and Comms

We have extensive experience in state-of-the-art penetration attacks on hardware, software and communication protocols, and have special expertise in cryptography.
