EAC TR and GOST-R Certification - Russia, Belarus, Kazakhstan, Armenia and Kyrgyzstan

Ensure compliance with Russian market access standards and secure the mandatory EAC TR TS, EAC TR CU and GOST-R certifications.

In the Russian market, 80% of products are subject to the mandatory Technical Regulations that have replaced the former GOST in almost all kind of products subject to regulation. Lack of this certification entails the immediate blocking of the merchandise at customs in the point of entry. Russian certification processes can be complex as local standards are often not harmonized with European and international standards. Once certified, products must show the EAC TR or GOST-R marking.

Our solution

Applus+ offers an integral support service for exports to Russia that covers the entire testing process and conformity assessment for your product, as well as securing the EAC TR TS, EAC TR CU and GOST-R certifications.
