CE Marking - EMC Directive

Meet the electromagnetic compatibility mandatory requirements to access the EU market.

To access the European Union market, companies must ensure the electromagnetic compatibility of their electrical and/or electronic products and ensure their compliance with EMC Directive 2014/30/EU.

This Directive is applicable to a wide range of electrical and electronic equipment, systems and fixed facilities. It aims to ensure that these products will not interfere with the proper operation of other devices, and that they themselves have an intrinsic level of immunity to electromagnetic interference.
The manufacturer or its representative in the European Union are responsible for their product declaration of conformity and CE marking.

Our solution
Applus+ Laboratories is Notified Body* No. 370 for the EMC Directive and we work with the manufacturers or importers of electrical and electronic products throughout the conformity assessment and CE marking process of their products.

Our service includes:

- Applicable tests identification
- Customized test plan definition
- Validation test plan management
- Technical file review

Applus+ conducts the tests under the applicable standards and has the laboratories specialized in electromagnetic compatibility required to meet the essential requirements established by this directive.
