

Comprehensive outsourcing of calibration

Improve the final quality of your product or service through the appropriate calibration of your measuring instruments

When a company's equipment requires dedication by one or more persons to execute the corresponding calibration plan, the organization is devoting resources to areas outside their core business.

Outsourcing the management of the calibration equipment allows the company to focus on its core business, optimizing its human and financial resources by delegating the management of its equipment to a specialized company.

Our solution

Applus+ Laboratories offers a comprehensive outsourcing service undertaking the responsibility for all aspects required for compliance with your organization's calibration plan:

Reviewing, improving and optimizing the existing calibration plan

Creating internal calibration procedures in those cases where it may be appropriate

Managing the external calibrations

Counseling on the design of the internal calibration laboratory

Applus+ technical staff present on-site for as long as necessary for the internal calibration of the equipment

Our technical staff's participation in the company's Quality meetings (calibration plan presentation, reports, and troubleshooting, etc.)

Our technical staff present in the external quality audits to address all aspects related to calibration

Maintaining the documents generated by internal and external calibrations.

We have been managing laboratories and complete calibration services for companies in the automotive, marine and capital goods industries for more than 10 years.

Benefits

Optimize calibration costs, defining a suitable and specific calibration plan

Smoothly pass equipment calibration quality audits

Adapt the calibration procedures to your real needs
